# DIGISER++

SCAN ME

digiser.tech

The DIGIMET technology is a metallurgical furnace for harvesting raw materials and energy from waste streams of energy-intensive industries. In this project, the technology is customized to the specific needs of a copper smelter and refiner company. A demonstrator will be built on site, in order to measure the reduction in raw materials need, energy consumption and waste volume, and the increased economic profit. These results will allow a further upscaling of the technology for deployment in a variety of industries.
